Pingable address for operational testing

- ## Proposal to update RPSL (Brian Haberman)

  - "pingable" attribute in the route(6) objects

  - advertised target IP address for reachability testing

  - ping-hdl (picg-c?!)

- Few comments ietf@ietf.org received

- Feedback needed

  - do you find it useful?

  - will you populate your route(6) objects once this is
    implemented?

  - or can you suggest an alternative?
