

# IPv4 and IPv6 PI

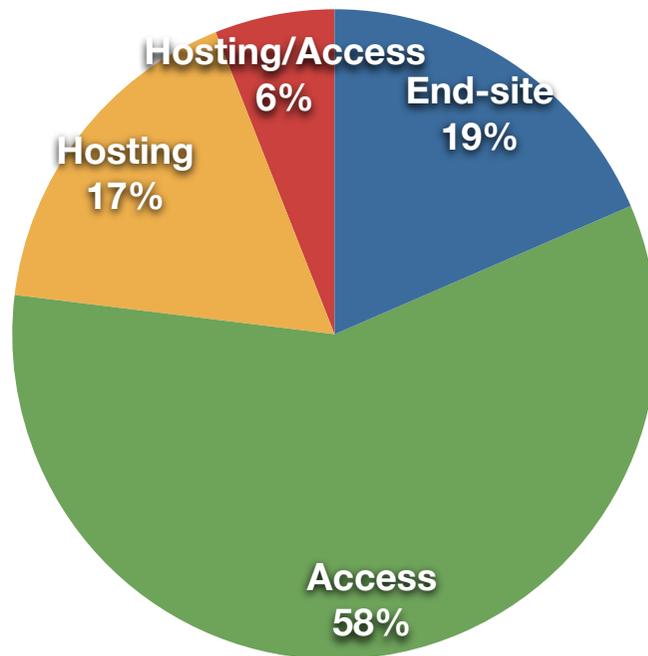

# IPv4 and IPv6 PI Policy

- The policy texts are not the same:
  - IPv4: “IP addresses used solely for the connection of an End User to a service provider (e.g. point-to-point links) are considered part of the service provider's infrastructure.”
  - IPv6: “The PI assignment cannot be further assigned to other organisations.”

# More 2010 IPv4 PI Statistics

# Results

- Around 10% of IPv6 PI requests currently get denied that would be approved for IPv4
- This number is expected to rise because,
- 2/3 of the requests we approve for IPv4 PI would not be approved for IPv6
  
- Do we want this?
