

2010-03

Dave Wilson
DW238-RIPE

Characteristics

Characteristics

- Specific to global policies

Characteristics

- Specific to global policies
- Allows the policy to go back to discussion if a change is initiated in other regions

Characteristics

- Specific to global policies
- Allows the policy to go back to discussion if a change is initiated in other regions
- Allows RIPE NCC/IANA to implement the policy if there are no further changes

Characteristics

- Specific to global policies
- Allows the policy to go back to discussion if a change is initiated in other regions
- Allows RIPE NCC/IANA to implement the policy if there are no further changes
- We may **speedily adopt a global policy, without causing delay** if proposal changes

Other approaches

- No change
 - ▶ possible that wording changes require the proposal to be resubmitted
- Only adopt when text reaches final stage in all regions
 - ▶ Makes RIPE process dependent on timing of processes elsewhere

Arguments against

- We could decline to make any change and continue to require that global policy proposals adopted by RIPE must be resubmitted as new proposals if modifications are required. This removes the benefits described above, but does ensure that any changes that are proposed from other RIR communities after RIPE has already adopted the proposal will get the full rigour of the policy development process.
